The Marine Products Export Development Authority (MPEDA) has been organising training programmes for the peeling shed workers in Kerala from 1984 onwards to give technical knowledge related to fish handling practices. The determination of the various factors which induced the peeling shed workers to attend the training programme will help the MPEDA in designing the future training programmes. So, the present work was undertaken to study the motivational factors responsible for the peeling shed workers to attend the training programme.

The study was conducted in Quilon district of Kerala. From among the 80 respondents who under went the training, 60 respondents were randomly selected. Five motives such as economic motive, affiliation

motive, innovativeness motive, prestige motive and achievement motive were selected after consultations with experts. Statements reflecting the different motives were formulated and after pre-testing, the responses were collected from the selected respondents. The paired comparison technique was used to find out the relative position of the motives of the respondents. From the responses frequency matrix (f-matrix), proportion matrix (p-matrix), and z matrix were framed. Then the scale values for each statement was obtained so as to present the preferences of respondents among the five motives listed.

The results of the paired comparison technique are presented in Table 1.

The motivational hierarchy was as fol-

^{*}Present address: Margaret villa, Edavanakkad P.O., Cochin - 682 502, India

lows: Innovativeness motive, economic motive, affiliation motive, prestige motive and achievement motive.

It was found that the main motive for attending the training programme was the innovativeness motive. Most of the practices in scientific fish handling were innovations for the peeling shed workers. Their curiosity to understand the unknown things induced them to attend the training programme. The peeling shed workers expected that whatever new knowledge they obtained from the training would be useful for their work. The next important motive was the economic motive followed by affiliation motive, prestige motive and achievement motive.

The authors express their gratitude to the authorities of MPEDA for providing necessary facilities to conduct the study.
