SUPPLEMENTARY MATERIAL

Supplementary Fig. 1. CEF cells infected with Fowl pox virus showing – clumping of cells, syncytia formation and detachment of cells at 48 hrs p.i (100×).

Supplementary Fig. 2. At 48 hrs of infection with Fowl pox virus showing cytoplasmic extension and Syncytia formation. H & E stain, (100×).

Supplementary Fig.3. Gel confirmation of PCR amplicons of avipoxvirus isolates adapted in chicken embryo fibroblast. L1: Fowl isolate, CEF, P-20; L2: Duck isolate, CEF, P-20; L3: Pigeon isolate, CEF, P-20; L4: Negative control; L5: 100 bp ladder.
